

@analytics

All you need to steer your activity

Data is the new blood.

In ICU only, a single patient generates 2000 data points per day. The amount of data is exploding to an overwhelming amount.

At the same time, expectations on reporting and KPI are growing from all sides: management and steering committees need comprehensive dashboards, authorities and regulation bodies are demanding accurate activity reporting.

Evolucare Analytics helps you face these demands and gives you the keys to steer your activity efficiently.

Key features

Easy viewing and building

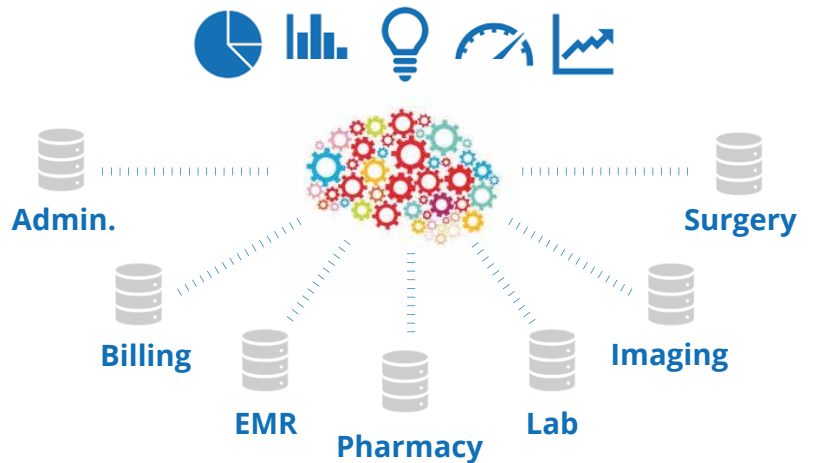

- catalogs of readily available reports
- create your own reports with simple drag and drops
- cross data from multiple sources (administrative, financial, clinical data...) in a single report

Easy sharing

- publish in the public library
- export in excel or pdf
- send by email occasionally or periodically through an emailing

With Evolucare Analytics, healthcare professionals get an overview of their activity in a few clicks to steer it even more efficiently:

- provide regulatory statements and reports in no time
- build a culture of performance: share indicators with your teams regularly and effortlessly
- improve continuously your processes

Our services

Professional services include:

- optimizing data capture in your applications
- building standard reports for your service
- connecting and exposing your various data sources

Standard services include installation, training and maintenance
